

DEV SHISHODIA

Software Engineer | Blockchain & Backend Development

✉ devshishodia21@gmail.com ☎ 9582175397 [LinkedIn](#) • [GitHub](#) •

PROFESSIONAL SUMMARY

Computer Science Engineering student (Blockchain Specialization, 2023–2027) at Bennett University with hands-on experience in smart contract development, scalable backend systems, and DevOps pipelines. Proficient in Java, Solidity, Docker, and AWS. Built production-oriented blockchain projects with real-world security and verification use cases. Seeking internship opportunities in blockchain engineering, backend development, or DevOps.

EDUCATION

10th – 89% D.P.S. R.N. Extension

12th – 75% D.P.S. R.N. Extension

B.Tech. in Computer Science Engineering — Blockchain Specialization

2023 – 2027

Bennett University, Greater Noida, Uttar Pradesh

TECHNICAL SKILLS

Languages: Java, Solidity, Bash / Shell Scripting, SQL
Blockchain: Ethereum, Smart Contracts, Hardhat, Web3.js, DeFi Protocols, IPFS
DevOps & Cloud: Docker, Kubernetes, CI/CD (GitHub Actions), AWS (EC2, S3, IAM), Linux
Tools & Others: Git, REST APIs, Backend Development, P2P Networking, Dynamic Programming

PROJECTS

- BlockGuard***Solidity, Hardhat, Ethereum, Web3.js*
 - Engineered a blockchain-based smart contract security system with custom access-control logic, reducing potential attack vectors by enforcing on-chain permission validation at every transaction entry point.
- CredChain***Solidity, IPFS, Ethereum, Java, REST API*
 - Built a decentralized credential verification platform that issues and validates tamper-proof digital certificates on-chain, eliminating the need for manual verification through third-party intermediaries.
- Pseudo Santa***Java, Smart Contracts, Backend APIs — In Development*
 - Architecting a privacy-first Secret Santa platform using smart contract-based anonymous matching logic, ensuring participant identities remain hidden while coordination is fully automated on-chain.

CERTIFICATIONS

- Decentralized Finance (DeFi): The Future of Finance***Coursera / INSEAD*
 - Mastered DeFi protocols, liquidity pools, yield farming, and governance mechanisms powering Web3 financial infrastructure.
- AI Engineer Professional***Coursera / Packt*
 - Covers core concepts like data preprocessing, model training, deep learning, and real-world AI application development using industry-standard tools and frameworks.
- Advanced Kubernetes***Coursera / LearnQuest*
 - Covers cluster architecture, networking, security, monitoring, and troubleshooting, along with hands-on experience in optimizing performance and ensuring high availability using Kubernetes best practices.
- Develop Generative AI Applications***Coursera / IBM*

Covers prompt engineering, working with large language models, integrating APIs, fine-tuning techniques, and deploying real-world applications such as chatbots, content generators, and intelligent assistants.
- Next-Gen Workplace Automation With GenAI***Coursera*
 - Next-Gen Workplace Automation with GenAI certification focused on streamlining business workflows using generative AI tools.

ACHIEVEMENTS & EXTRAS

- Organizing Board Head, College Sports Committee (2-year tenure) — Led planning and execution of campus-wide sports events, coordinated cross-functional teams, and ensured smooth operations and high participation.
- Invested 20,000+ INR in industry-recognized certifications across blockchain, networking, and algorithms demonstrating self-driven learning initiative.
- Regular hackathon participant, building projects to gain hands-on experience.
